Department of Philosophy Invited Lecture
as part of the COREmind Project

IDIOSYNCRATIC GROUNDING: SYNESTHESIA, LANGUAGE, AND ABSTRACT THOUGHT

Roy Porat, PhD (Ludwig Maximilian University of Munich)

Time: Friday, October 30, 2026, 10:30—12:00
Venue: Room SP214, Sedláčkova 15
Department of Philosophy, Faculty of Arts
University of West Bohemia in Pilsen

How does perception ground abstract thought? Embodied accounts of cognition hold that abstract concepts are grounded in matching concrete representations - either by simulating a specific instance or by mapping them onto structurally similar domains (for example, affection as temperature in "a warm person", importance as weight in "a heavy matter" and so on). But what if grounding can also be idiosyncratic – what if importance could be grounded in temperature, or affection in the color blue? Drawing on synesthesia's conceptual asymmetry, its sensitivity to meaning, and its modulation by attention, I propose to reframe it as a conceptual rather than a perceptual phenomenon - and in fact, as an idiosyncratic instantiation of the very mechanism by which abstract thought is grounded. I will present several lines of evidence for this account, focusing on the novel phenomenon of Abstract Lexical Synesthesia, and discuss some of its implications for theories of conceptual representation and philosophy of mind, particularly regarding the relation between language and thought.

This lecture is being held at the University of West Bohemia as a part of the project "Social-Cultural Determinants of Circulation of Representations: The Impact on Human Mind and Strategies of Remediation", registration number CZ.02.01.01/00/23_025/0008715, with financial support of the Johannes Amos Comenius Programme (P JAC), provided by the Ministry of Education, Youth and Sports of the Czech Republic (MS MT) for realization of the project in the period 1/2025 – 12/2028.
